

docker

What is Docker

Build, Ship and Run
Any App, Anywhere

<http://www.docker.io>

What is Docker?

- Helps to create **Container** from an **Image**
- An **Image** is a sharable snapshot of our application. Ex: Ubuntu with php,nginx and your application code.
- A **Container** is running instance of an image. Ex: Running the above image.

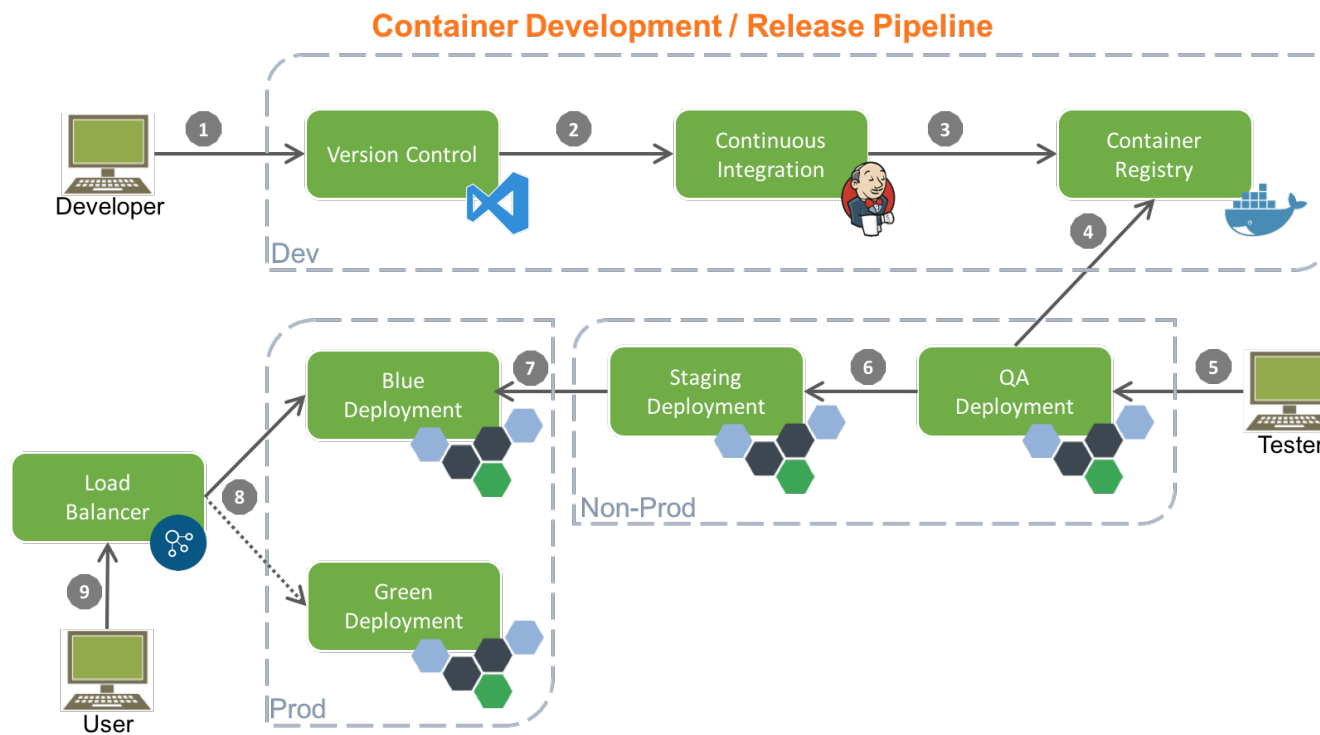

Why Docker?

- Increase Developers Productivity.
- Backend Engineer
- Frontend Engineer
- UX Engineer
- Tester

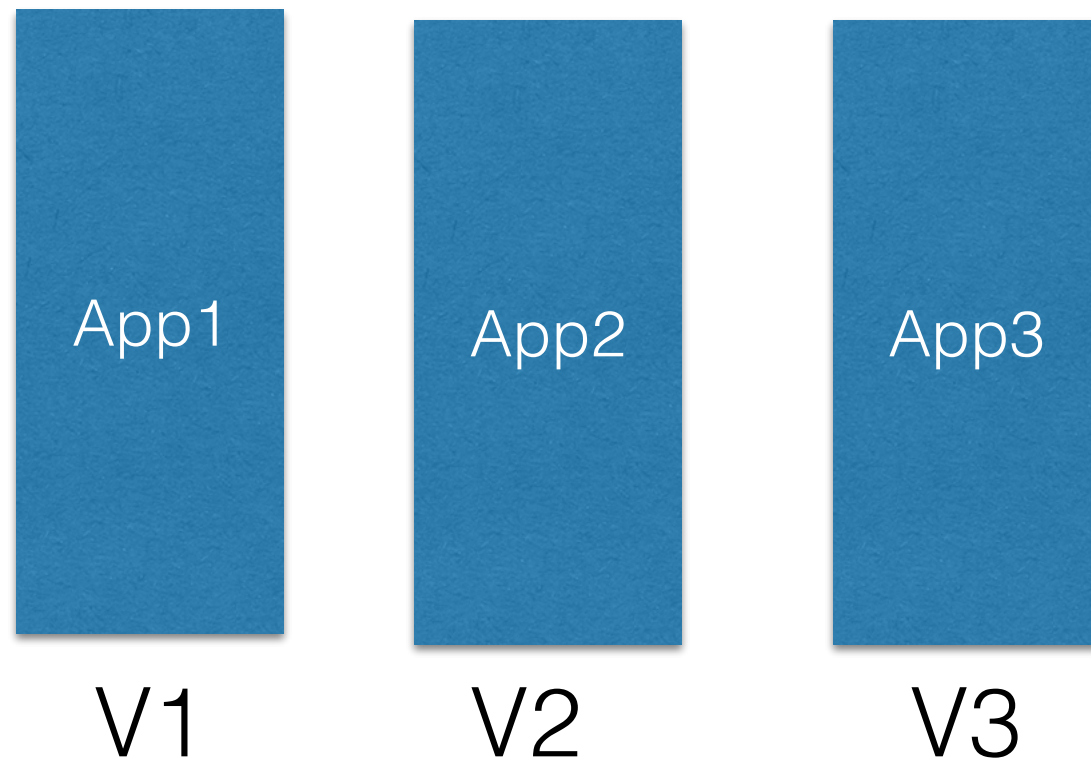

Why Docker?

- Environment Consistency
- Development
- QA
- Staging
- Production

Why Docker?

- Quickly Testing Apps
- Different Version
- Different Framework
- Debug your application

Installation

<https://www.docker.com/products/docker-toolbox>

- Docker Client
 - Interact with Container ex: Build, Run, Start/Stop etc
- Docker Machine
 - Install Docker Engine on Virtual Host
 - Manage Virtual Host
- Docker Engine
 - Lightweight runtime and robust tooling that builds runs your Docker containers
- Docker Compose
 - A tool for defining and running multi-container Docker Application
- Docker Kitematic
 - GUI for Docker

Stop Your Talking

Show Something Interesting Man.. :)

Give it five Minutes
